Professional Summary

Entry-level software/IT candidate with hands-on experience in database design and self-hosted infrastructure projects (Docker, Linux, Nginx, MQTT). Built and maintained technical projects involving secure remote access and automation.

Education

Hunter College, CUNY — B.A. Computer Science

Graduated 2025

Core Skills

Languages: C++, SQL, JavaScript/TypeScript, Python, HTML/CSS, Dart

Tools/Frameworks: Git, GitHub, Docker, Docker Compose, MySQL, Nginx, Linux, Visual Studio, Android Studio, Flutter

Experience

Database Design Intern, Brooklyn Chamber of Commerce – Brooklyn, NY

Jul 2024 – Aug 2024

- Designed a normalized database in Microsoft Dataverse, including entity relationships and data models, to improve organization and management of customer information.

Crew Member, Dunkin Donuts – Sunnyside, NY

Oct 2022 – Mar 2023

- Managed food prep, cashier/POS transactions, and customer service in a fast-paced retail environment while maintaining cleanliness and service standards.

Tutor, Bobby-tariq Tutoring Center – Jackson Heights, NY

Jan 2019 – Dec 2019

- Tutored students in STEM subjects and adapted explanations to match individual learning needs.
- Improved student understanding through structured problem-solving practice and targeted review.

Projects

Home Server Infrastructure (Docker) — Secure Public Access + Camera Detection Automation

imelvee.github.io/camera-server

- Built and maintained a Dockerized Home Assistant, Frigate, and Mosquitto stack for AI-based person detection and home-security event handling.
- Configured secure public access through an Nginx reverse proxy with automated TLS issuance/renewal via ACME DNS-01 and WAF protection using ModSecurity + OWASP CRS.
- Implemented MQTT-driven alert automations and tuned Frigate video processing with Intel iGPU VA-API substream decoding to support efficient camera detection workloads.

Spotify Interface

imelvee.github.io/peepify

- Built a Spotify interface using JavaScript/Vite with authentication and song-based recommendation functionality.
- Implemented frontend interaction and backend logic to process user input and return recommendation results.

Game Engine Implementation

imelvee.github.io/game-engine

- Built a simple game engine in C++ using GLFW and GLAD, then developed a basic game on top of the engine framework.
- Implemented core rendering/window setup and project build configuration.
